

## **Fire & Arson Scenario Investigation**

Lesson 1: 10:45

In the first of a multi-part series, we follow the fire and arson investigators of P.F.F.I.A, the Professional Fire & Fraud Investigators Association, as they test their investigation skills on specially-designed evolutions. In this one, investigators examine evidence at what at first glance appears to be a room and contents fire. Their investigation leads to the basement where something more sinister exists: the theft of natural gas which presumably was the cause of this fire.

Lesson 2: 7:58

As our multi-part series continues, we follow the fire and arson investigators of the Professional Fire & Fraud Investigators Association. In this lesson, investigators examine evidence at what at first glance appears to be a fire set in a living room recliner. In reality, an accelerant was involved which directed fire to the recliner.

Lesson 3: 8:55

As our multi-part series continues, we follow the fire and arson investigators of the Professional Fire & Fraud Investigators Association. In this lesson, investigators examine follow the smoke evidence to the kitchen in this house where they are led to a fire behind the stove -- and some very unusual findings relating to the stove.

Lesson 4: 6:46

We wrap up our series with Part 4, this time covering a fire in the basement. Investigators note more damage as they approach the furnace. The furnace unit had a burn pattern on one side and consumed Class A combustible materials were found at the base of the unit. Inspection of the furnace unit revealed a rag stuffed into the flue pipe. A recap of all the procedural steps and techniques covered in the previous segments of the series were also presented.
